Our products

In stock or not?

In this catalog you will find many, but not all of our products.

Some products are new and not yet in stock, others have been around for many years, constantly being updated.

What colors and article numbers?

We normally stock most products in black, olive and grey. Multicam exists in some products. To be sure what we have in stock, please check our webshop at <https://snigeldesign.nordicshops.com>.

Our colors: Black= 01, Coyote= 05, Grey= 09, Khaki= 12, Navy= 14, Olive= 17, White= 25, Swedish forest= 50, Swedish desert= 51 and Multicam= 56.

We are in the middle of a change of article number systems, that is why you sometimes see two different article numbers on some products. The new system has numbers, the old one letters.

Restricted?

Some of our products are restricted to government sales. These products are only sold to government agencies or similar. All these products are marked with **RESTRICTED** in the catalog.

Who is SnigelDesign?

SnigelDesign is an independent Sweden-based company, driven by a group of officers, designers and engineers who are passionate about elevating the quality and function of personal equipment for modern soldiers and law enforcement officers. Founded in 1990 by a military officer who later earned an MA in Industrial Design, the company is guided by a “no compromise” philosophy on function, quality and comfort.

SnigelDesign is powered by passion. We design the products ourselves. We use them ourselves in the Swedish Army where we still are part time soldiers. Our experience, combined with our customers’ expertise, forms the basis for the improvements that we constantly make to our products.

SnigelDesign is not big, so we can easier focus on you, the user, to give you the best possible products and service. We develop products because we want to use the best that can be made. We do not compromise with function or quality because we don’t have to. We want the best and we want to offer that to you.

What do we do?

We design, manufacture and sell complete personal load carrying and protection systems, for police and military personnel.

Design, development and general management is handled in Stockholm, Sweden, with scalable production in a range of dedicated locations. As an independent firm, we are able to set our own course and develop the types of products we feel set a “next generation” standard with zero bureaucracy.

Currently, we supply or have supplied services and equipment to the Swedish, French and Norwegian Army, the Swedish, Italian, Belgian, French, Finnish, Norwegian and Danish National Police, a number of Special Forces and police tactical teams across Europe and the FBI HRT.

We also develop and manufacture carrying equipment as a subcontractor for companies producing electronics or other types of products requiring protective covers, slings, bags and other carrying systems.

Our history

Per-Henrik Magnusson, aka PH, is a military officer and load-carrying expert who is the founder of SnigelDesign.

In 1977, at the age of 14, he designed and manufactured his first backpack – a copy of the Swedish Army Backpack 35LK. Over the next 10 years, PH made more than 200 backpacks for friends and family as well as other people who had heard about them. Many of these packs are still in use today. In 1982, he served in the Swedish Army as an Airborne Ranger and later became a reserve officer. At age 52, he is still active as a home guard platoon commander in Sweden. During the 1980s, PH began to develop combat vests and different pouches for military use. These were tested during numerous missions both in Sweden and abroad, and changes were made continuously.

In 1987 PH started his education to earn a Master's Degree in Industrial Design in Stockholm. The practical part in school included a six-month internship at the Swedish Defence Materiel Administration (FMV) developing a very large backpack with a functional chest rig – experience that later proved invaluable. He founded SnigelDesign in 1990 with an ambition to elevate the function and quality of load-carrying equipment for some of the most demanding defence applications. From 1991 to 2006, he worked as Head of Design and Product Management at Snickers work wear, in parallel with his dedication to SnigelDesign.

Since 1998 SnigelDesign has developed most load-carrying systems, bags and pouches for the Swedish Army, including the new combat vest 2012.

- . In 2004, SnigelDesign won the tender for the Swedish National Police equipment belt: We have supplied over 24.000 of the belts to the Swedish police to date.
- . In 2005 Anna as the first employee of the company started to take care of administration and customers.
- . In 2006 Dick, a Marine NCO, joined PH as a partner with responsibility for a number of key customers, product training and also worked with development.
- . In 2009 SnigelDesign won the tender for Tactical ballistic vest for the Swedish SWAT teams.
- . In 2010 Heidi, our super sample maker and product developer started.
- . Susse started in 2011 to help us take care of you, our customers.
- . Tomas started in 2012, first with production but now he is responsible for our partners.
- . In 2013, after more than 15 years of development we won the tender to supply the Swedish Army with our 120 litre backpack system.
- . From 2008 to 2015 Kina worked here with design and pattern making in the product development department.
- . In 2013 Sebastian started in our company to put in new ideas in our product development department.
- . Carl joined the team in 2015 as CEO to boost our business skills and handle general management issues and Andreas to make logistics as professional as the rest of the company.

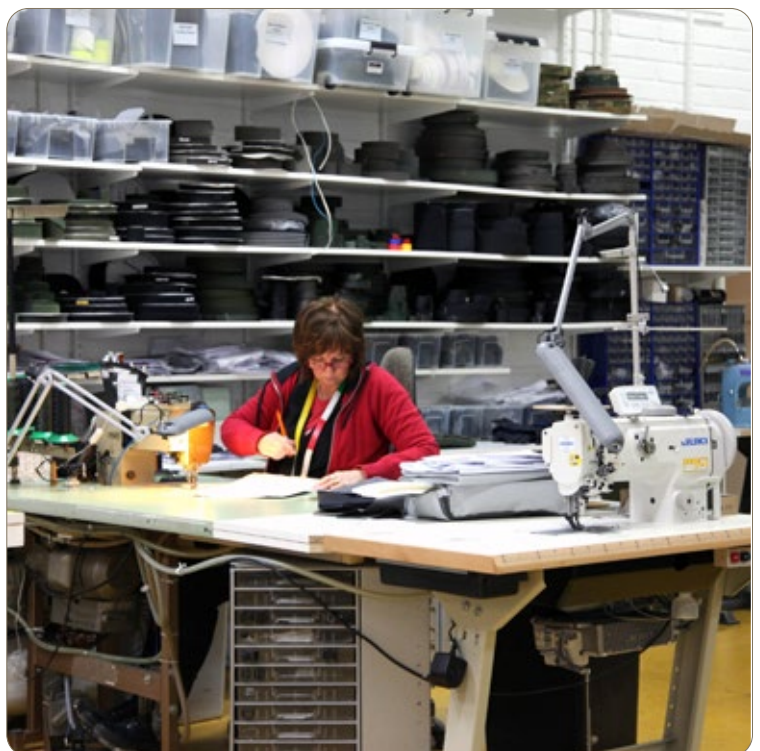

There are currently 9 people in the company, Dick at training, R&D and direct sales, Tomas at partner sales, Carl as general manager, Andreas at logistics, Susse and Anna at customer service and finally PH, Sebastian and Heidi at R&D. We also work with a growing network of sales partners across Europe.

Design philosophy

Product development is the heart of our business.

We are passionate about improving our products to make them as good as possible.

Product development never stops, a product is never finished and it can always be improved.

Demands on personal load-carrying equipment

The evolution of modern armed conflicts is driving changes in the demands on the soldier's gear towards more complex, heavier equipment loads.

Carrying more, not less

Modern soldiers are increasingly required to carry more, not less. Typically, when an 80 kg soldier stands on a scale with his standard gear on, he weighs in at 125 kg, (45 kg of equipment). For longer field manoeuvres, he carries his large rucksack, weighing in at 145 kg (a whopping 65 kg of gear).

Importance of system thinking

From an ergonomic perspective, a soldier should not be carrying a load in excess of 30% of body weight. Unfortunately, this is seldom the case. As a result, there is an acute need for smarter, lighter systems that can be easily adapted for different missions, environments and threats. To cope with conflicting parameters, system thinking is required in order to ensure the optimal result: maximum comfort, safety and logistical efficiency.

Modern personal equipment needs in brief

- . Enhanced protection on all levels
- . Modularity for adaptable, mission-specific solutions
- . Intuitive, easy and fast
- . Enable economical and practical logistics solutions

Achieving heightened protection on all levels

Protection from ballistic threats is a given, but in many cases the most severe dangers are heat, cold, rain and snow. Fire is a constant threat that must be countered. Also, it is vital to evade detection by visual or thermal sensors. Design parameters can be conflicting; measures to increase ballistic protection normally lead to increased weight and heat stress and decreased mobility as one example.

Adapting for different missions and threats

It is costly and impractical for modern fighting units to have separate systems for different conditions. It is also unnecessarily complicated to learn to use a lot of different pieces of kit properly. Instead, the need is for personal equipment that can be adapted and configured modularly for use in diverse missions in multiple environments.

Minimizing restriction for the soldier

Today, there is a greater need than ever to carry mission-specific equipment and move through various challenging terrains. Consequently, it is vital for the soldier to be able to move, hear and see as much as possible while wearing full combat gear. The load-carrying system must be as comfortable as possible. It must allow the head to move freely with ear defenders on, facilitate free movement of the arms and legs and let the soldier crawl, run and jump.

Accommodate for all gear during all mission phases

The dismounted mission, which forms the base for all development of personal equipment, is divided into stages: Transport to the mission area, planning, rehearsal, insertion, foot march, break, obstacle negotiation, rest-up base establishment, recon, mission execution, foot march, extraction, and post-mission briefing. Each stage places different demands on the personal equipment, so the various parts of the system must be designed for multiple purposes. The equipment must work for all types of soldiers and specialists: commander, radio operator, medic, sniper and more.

Easy, intuitive, and fast to reach

A fundamental criterion is that all equipment is placed so that it is easy to work with. Pouches, bags and backpacks must be easy to open and close, while still keeping contents securely stowed. It should be possible to do this silently, in the dark, wearing gloves.

Sub-system compatibility

It is not uncommon for the uniform to have been developed by one department, the vest by another, some pouches by the weapons division, the survival pouch by another and so on. In other words, the sub-systems are not necessarily designed to work together, making it difficult to optimize the soldier's personal equipment. For optimal results, the soldier must be treated as a holistic system where all parts work in concert. Someone must "own" the soldier and all interfaces, prioritize what should be carried and ensure a fully integrated, modular approach.

Economical and manageable logistical solutions

The amount of equipment the modern soldier needs to carry and the varying environments he or she is expected to work in has led to increased complexity and cost. This, in turn, creates a logistical burden for the chain servicing the troops, making it even more important to come up with smarter, modular solutions to minimize the number of components to be purchased, stored, distributed and serviced.

For current stock status, please visit snigeldesign.nordicshops.com

Our next generation load-carrying solution

Over the past 25 years, guided by a philosophy of uncompromising functionality, we have worked closely with numerous armed forces around the world to develop a truly forward-thinking approach. It is a modular system that provides an exceptionally high degree of flexibility for a wide range of threats and missions, and is available in colors and patterns suitable for most regions.

For added clarity in the illustrations below, the component described in each section is shown in MultiCam®, with the rest of the system in grey.

Fully integrated clothing sub-system

Designed with a holistic approach, the clothing sub-system comprises all the standard parts: underwear, insulation garments, combat shirt, trousers and jacket, all-weather trousers and jacket, lightweight shell trousers and jacket and various types of gloves and caps. All garments are designed to work together, as well as with the load-carrying and protection systems.

The garments are worn in layers to suit the climate, and are cut to give greater freedom of movement and added mobility. They include large ventilation openings as well as pockets that are placed so they can be reached when worn with the carrying and protection systems. Knee and elbow pads are integrated into the garments for added comfort and protection. As one example of how the clothing and load-carrying systems work together, four pockets are placed on the lower trouser legs. This placement makes the kit easy to reach when kneeling, for instance when the medic is treating a wounded comrade.

Load-carrying and protection sub-systems

The SnigelDesign integrated ballistic protection and load-carrying system can be adapted to provide basic protection to ensure maximum mobility and less heat stress, or for maximum protection with fewer demands on mobility, or all combinations in between.

The vest comes in small, medium, and large to accommodate most body sizes. It can be closed with straps only in the side for maximum ventilation and lowest weight. For added protection, ballistic side pouches in three different sizes can also be attached. Equipment pouches can be attached to the straps or side panels.

Add-on ballistic protection

For higher than normal threats, additional protection panels and hard plates can easily be attached to the standard vest. The added protection includes throat/neck, shoulder, upper arms and groin kits. For maximum protection, lower arms and full leg coverage can also be added.

Pouches and holders

The pouch system consists of a range of accessories that can be fitted to the vest, allowing an easily configurable load-carrying capability that can be tailored to the needs of the individual user. Many of the pouches can be attached either vertically or horizontally, making it easier to use the available space on the load-carrying system. Some pouches are specifically designed to fit a certain piece of equipment, but most can be adapted for many types of gear.

The opening and closing function of pouches must be carefully designed to meet conflicting needs. Not only must pouches be easy and fast to open, but equally easy to close to minimize the risk of losing equipment. The closing must also be secure to prevent accidental opening while running or climbing, for instance. On top of this, the opening needs to be silent, it must work while wearing gloves, in darkness and without looking at the latching mechanism.

All SnigelDesign pouches are designed for swift and silent feel-only opening and closing, while keeping the content secure in all weather conditions. Zippers are stiffened to ensure snag-free operation, even when they are hard to reach.

Backpacks and bags

As part of the load-carrying system, we have developed various duffle and other bags for transport to the mission area. For the insertion phase a 120 or 90-litre rucksack are used. From base, a 40 or 25-litre detachable backpack is used, either on its own or attached directly to the vest. The mission packs are fitted with interchangeable inserts designed to meet the demands of various specialists, allowing users to carry the extra equipment required for a 24 to 48-hour mission.

Flexible usage in multiple configurations

The next-generation personal equipment system is designed to be used in many configurations – for various missions, climates and threats. A few examples are:

Hot climate, medium risk

Basic equipment for maximum mobility and low heat stress. Combat shirt, trousers, open sides plate carrier with front and back protection and a minimum amount of pouches.

Temperate climate, high risk

Typical configuration for high-risk tasks. Combat jacket and trousers, plate carrier with front, sides and back protection, yoke, sleeves and crotch kits added.

Temperate climate, medium risk

A heavier load for an extended period of time of operations requiring a mix of medium protection, more carrying capacity, less mobility and long endurance. Combat shirt, trousers, plate carrier with front and back protection, additional pouches and a detachable mission backpack mounted on a 120-litre rucksack.

DUTY GEAR

System

This system is for uniformed carrying and is based on our equipment belt and the various pouches mounted on the belt. It has been designed with safety, functionality and comfort in mind.

Comfort

Our belt is one of the most comfortable equipment belts in existence. It is padded and shaped to sit comfortably around the body, even when fully loaded.

The pouches are mounted between the inner and outer belt so that no edges or hard surfaces press against the body. The padded inner belt has friction fabric facing inwards towards the body. This non-slip material helps to hold the belt in place, reducing the need to tighten excessively around the waist.

Availability

The pouches are designed to be easily accessible and can be mounted at several different levels, some pouches vertically or horizontally. The pouches can be attached without removing the pouches that already are mounted on the belt.

Security

The belt has a three-point buckle to prevent accidental opening and a safety strap that closes over the outside buckle.

The pouches are fitted between the inner and outer belt making them virtually impossible to pull off. The belt is extremely difficult to ignite.

COVERT GEAR

System

This system, like all our other systems, is comfortable, safe and provides easy access to the equipment carried in it. The design has also incorporated the element of concealment as an essential.

The system is based on our equipment vest with specially designed and sewn pockets and, compartments. The vest is available in two different versions, tailored specifically for each task – Surveillance and Tactical.

We also have pouches for covert carrying that can be attached to a trouser belt.

Comfort

The vests are well tailored, distributing pressure evenly over the shoulders and around the body.

They are very lightweight, durable and the size is easy to adjust.

One of the biggest advantages is that you know that you have all your equipment in one place, the vest. When off duty, you can take off the vest with the confidence that all your equipment will remain in place.

Availability

The pistol can, as usual, be carried in the trouser belt. The vest is cut so as not to block access to it.

Two compartments for left or right hand shooters, for the pistol, is sewn on the inside of the vest.

The compartments on the vest are designed and positioned to make what you need most frequently, quick and easily accessible.

Pouches and belts

We have holders and pouches as well as belts especially designed for covert carrying of police equipment.

Harnesses

Two different harnesses are in our inventory so you can carry radios, a baton, handcuffs and CS spray in a comfortable and safe way.

Surveillance vest

This vest has compartments for the equipment that is needed during surveillance

Tactical vest

This is the vest for users who carry heavier weapons with extra magazines, etc.

Covert backpack

The covert backpack looks like a backpack or a bag, but transforms to a ballistic vest with carrying capacity.

TACTICAL SYSTEM

System

The ballistic system is designed with the same ideas as our other systems. Freedom of movement, accessibility and flexibility. On top of that, we have added ballistic protection.

The system is fully compatible with our clothes and all our pouches, bags and backpacks.

Comfort & mobility

The ballistic protection is designed to minimize restrictions in movement and to be as comfortable as possible.

The shoulders are padded for maximum comfort.

The ballistic protection is divided into many parts: the front panel, back panel, sleeves, groin protection, belt and yoke. These parts will give you good movement and flexibility.

The collar is cut low, not to interfere with the helmet or restrict your vision.

Protection

The protection level of the vest can be adapted to suit your requirements.

We put priority on movement before protection as ease of movement is a very good protection.

Availability

The vest is covered with MOLLE webbings so you can place the pouches where it suits you best.

Communication

The radio can be attached anywhere you want. There are several options where you can run the cables so they do not get caught. When not in use, the earpiece can be stored in a special compartment, keeping it protected.

MILITARY SYSTEM

Belt

The trousers belt is stiffened and will not twist when you carry a leg attachment

Attaching gear to the belt

Leg attachments are secured with a Velcro loop that makes it possible to attach them without opening your belt.

Leg attachment

Leg attachments are stable and comfortable on either your right or left leg.

A range of specially design pouches are available to choose from and attach to your leg.

Weapon attachment

The weapon can be carried in a sling, attached to the equipment vest. You relieve the neck and increase your comfort considerably. This makes it easier to concentrate on your task.

Accessibility

The pouches can be attached in different ways and in different places giving you the ability to grab the content you want.

The pouches are designed to make it easy and fast to change magazines.

The dump pouch is rolled out for the fast storage of empty magazines or other things.

Silent

The tactical pouches can be opened silently so you can change magazines without being heard.

Communications

The radio can be attached wherever you want.

There are several options to route wires for microphone, PTT and headphones so they will not get stuck.

Survival

The small backpack can be attached to the equipment vest. It can be worn pulled up or down when you wear a backpack. It has a built-in mini-sleeping mat and houses equipment to let you survive 1-3 days.

Mission backpack

A backpack for all soldiers and their 24-48 hour needs is attached on the outside of the big backpack.

Flap and back pocket

Parts of the large backpack can be detached and used separately to cover your needs for one day.

Large backpack

It is always a problem to bring enough equipment for one week in a tactically sound way.

We have designed a backpack that will work with the uniform, equipment vest and other equipment.

The backpack is big enough for you to easily store all your equipment.

Pockets are positioned to be easily accessible when you are resting.

All surfaces that rest against your body are padded and ventilated to maintain the highest possible comfort.

Snigel solutions

At SnigelDesign we realize that it is all about systems, products working together, but it is also about details, making each product work on its own. So, we have a number of solutions that we use in our products and here are some of them.

Slotted leg pockets

Allows you to route the leg strap under the leg pocket so you still can use the pockets when carrying a leg rig.

Safe MOLLE

A simple way to attach your pouches to your vest.

Shit pants

The extended zipper lets you do your stuff without pulling down your trousers.

Shifted knee pockets

Makes sure the kneepad lands where your knee lands when kneeling

Swivel attachment

Makes it possible to attach the pouches vertically or horizontally.

Size & season adjustment

Is a way to adjust first for individual size once and then easily every day for season, or temperature.

Silent hook

One hand, no-look, silent opening and closing of pouches.

Snug fit.

A one-hand tightening system for your ballistic vest.

CLOTHES

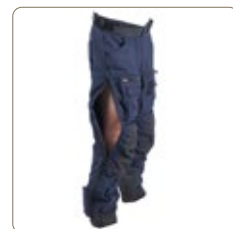

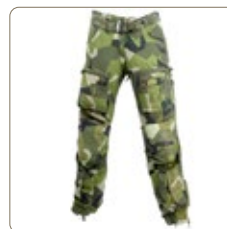

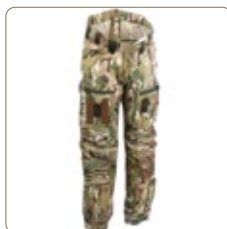

Tactical trousers -14

Large belt loops and a Velcro adjustable front closure.
 Two side pockets that can be reached by both hands.
 Two back pockets with side opening.
 One side/back pocket on the left side.
 Thigh pockets with zipper. The pockets are on the front of the leg so they do not move when you run. They are made with a tunnel under, so you can put your holster behind them and pull the straps under the pocket.
 Shin pockets for first aid kit and leg protection with a Velcro flap.
 Two pockets on the lower back leg for bandages or similar items.
 Pre bent knees to increased mobility.
 Knee pockets for padding placed so you land on them when you kneel.
 Long ventilation zips on the outside of the leg.
 Elastic lower end with press button closure for a dirt-proof connection between boots and trousers.
 Shoe attachment system in the leg to keep the boots and trousers together all the time.

The trousers are available in various fabrics and colors.

Sizes: 44-62, 82-128, 144-162. Weight: 880 g

Article no. 06-00825

Tactical jacket -14

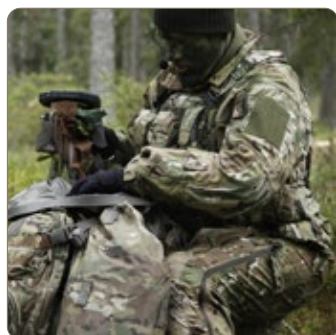

A jacket that is cut for freedom of movement and adaptable ventilation to keep you comfortable in different climates.

Elbow pockets for padding.
 Two big sleeve pockets with outside compartments and Velcro for patch attachment.
 Two lower sleeve pockets.
 Left lower sleeve has a pen pocket and a Velcro patch for a writing board.
 Velcro adjustable sleeve ends.
 Two chest pockets and two side pockets as well as a back pocket with the opening on the left side.
 Ventilation zips in the arm pits.
 Elastic adjustable cord in the waist and in the lower end.
 Mesh liner to be as cool as possible. Double layers of fabric in the bottom of each pocket for added strength.

The jacket is available in different fabrics and colors.

Sizes: XS-XXL. Weight: 880 g

Article no. 07-00827

For current stock status, please visit snigeldesign.nordicshops.com

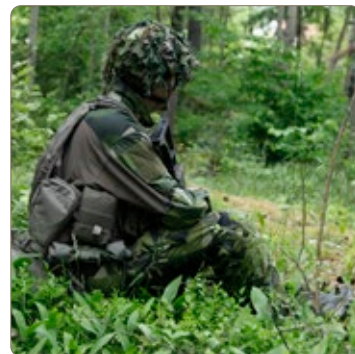

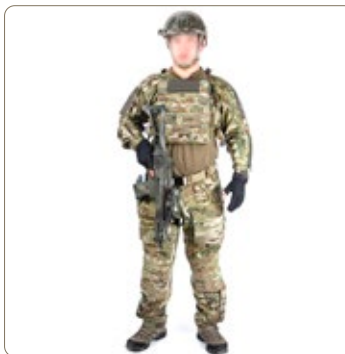

Combat shirt -15

A combat shirt that is cut for freedom of movement.
 Fabric on sleeves for strength and tricot in the body for ventilation.
 Elbow pockets for padding.
 Two big sleeve pockets with outside compartments and Velcro for patch attachment.
 Two lower sleeve pockets.
 Left lower sleeve has a pen pocket and a Velcro patch for a writing board.
 Velcro adjustable sleeve ends.
 The Combat shirt can be made in different fabrics and colors.

Sizes: XS-XXL. Weight: 600 g

Article no. 08-00589

Tactical coverall -10 RESTRICTED

A fire retardant coverall in Nomex designed for operators working with a ballistic vest or similar.
 Limited cut protection in the groin area, on the shoulders, knees, lower arms and back legs.
 Thin fabric on the front for some ventilation
 Kevlar/polyamide reinforcement fabric on the knees and elbows.
 Elastic back for good movability and ventilation.
 Hood inside collar.
 Ventilation zips in the arm pits.
 Two big sleeve pockets with outside compartments and Velcro for patch attachment.
 The zips in the sleeve makes it easy to insert a needle into the arm, to get fluids into the body.
 The leg pockets are on the front of the leg so they do not move when you run. They are made with a tunnel under, so you can put your pistol behind them and pull the straps under the pocket.
 Full length leg zips for ventilation and to make it easy to put the coverall on when wearing boots.
 Pre-bent elbows and knees with pockets for padding.
 Shin pockets for first aid kit and shin protection.
 Adjustable waist and sleeve ends.
 Shoe attachment system in the leg end for a dirt-proof connection between your boots and the coverall.

Sizes: XS-XXL/short, XS-XXL/regular, XS-XXL/long. Weight: 1900 g

Article no. 08-00589

BELTS

Rigid trouser belt -05

The belt to use when you carry something heavy.
It supports the load and remains comfortable.
The belt has one channel for 2-3 cable ties.
Reinforced with a semi-rigid plastic sheet.
It supports the load, does not twist or sag and remains comfortable.
Buckle and Velcro closure in the front.
One size fits all up to a 125 cm waist.

Dimensions: L=130 & W=4 cm. **Weight:** 90 g.

Article no. 11-00498

Riggers belt -10

The belt to use when you carry something heavy and when you want to be able to secure yourself to a structure or platform.
Reinforced with a semi-rigid plastic sheet.
It supports the load, does not twist or sag and remains comfortable.
Easy to open steel buckle and Velcro adjustment of the belt.
Channel for cable ties.
Reinforced loop for a carabiner.
Not CE certified.

Dimensions: XS= 65-93 cm, S= 75-103 cm, M= 85-113 cm
L= 95-123 cm, XL= 105-133 cm, XXL= 120-148 cm.

Weight: 160 g

Article no. 11-00567

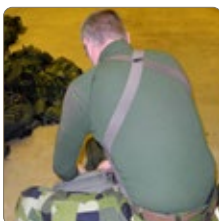

Covert equipment belt -12

An equipment belt system with an inner and outer belt.
The inner belt is carried in the trousers and the outer belt is attached on the inner belt with Velcro.
The equipment pouches are attached on the outer belt.

Sizes: S= 73-98 cm, M= 81-106 cm, L= 89-114 cm,
XL= 97-122 cm, XXL= 105-120 cm, XXXL= 113-138 cm

Weight: 160 g

Article no. 11-00344

Braces -12

The design is inspired by the old US Army braces from the 1950's.
The braces are attached in the side of the trousers. Thread it around the belt or through the bands on the trousers.
When you need to take a dump, just release the braces in the side and pull down your trousers. This is very good when you have a vest or padded jacket on. One size only.

Weight: 90 g

Article no. 10-00215

Police equipment belt –09

An ergonomical belt designed to improve your comfort whilst carrying a heavy load.

Padded inner and semi rigid outer belt construction.

Ergonomically shaped to fit around the body with minimum pressure.

High friction inside to minimize the pressure required to keep the belt up.

Padded inner belt for comfort.

Channel for cable ties.

The outer belt is reinforced with a semi-rigid plastic sheet so it will stay up when loaded with a pistol holster.

The belt supports the load, does not twist or sag and remains comfortable.

A three point security buckle prevents unwanted opening.

Extra security strap over the buckle for added safety. This strap also serve as a glove holder.

Dimensions: XS= 65-93 cm, S= 75-103 cm, M= 85-113 cm,
L= 95 -123 cm, XL= 105-133 cm, XXL= 120-148 cm. **Weight:** 450 g

Article no. 13-00483

Basic equipment Belt –06

A well-designed belt to improve your comfort when you carry a normal load.

One belt construction that is reinforced with a semi-rigid plastic sheet.

It supports the load, does not twist or sag and remains comfortable.

A three point security buckle, prevents unwanted opening.

Dimensions: XS= 65-93 cm, S= 75-103 cm, M= 85-113 cm
L= 95-123 cm, XL= 105-133 cm, XXL= 120-148 cm.

Weight: 300 g

Article no. BEB-06 or 12-00507

Police belt adjuster –09

The adjuster makes it easy to adjust the size of the equipment belt when you change from heavy winter clothing to lighter clothing.

It is fastened to the right side of the belt and then threaded through the belt buckle.

This adjuster is very neat when you are changing your clothing during the day. In the morning, it is cold and you wear more clothing. When it gets warmer and you remove some clothing, you need to tighten the belt, and then you use the Belt adjuster.

Dimensions: L=22 & W=5 cm.

Weight: 15 g.

Article no. 10-00486

Equipment belt harness –10

A basic harness that will take some pressure of your hips when used with the equipment belt.

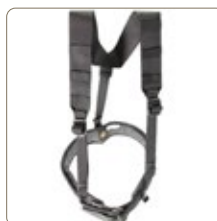

Adjustable in length in the back and front.

Attaches to our police equipment belt with Velcro patches. It will not interfere the possibility to attach pouches. One size, adjustable to fit all.

The belt is not included.

Weight: 180 g

Article no. 15-00607

For current stock status, please visit snigeldesign.nordicshops.com

Combat belt –12

A padded belt with two MOLLE webbings sewn on the outside for a comfortable carry of any type of pouch or holster.

The MOLLE webbings are sewn on eight cm wide panels with slots between the panels. The inner belt can be placed on the outside of one or more panels so a pistol holster can be worn.

An inside 25 mm band is sewn under the panels, use it to attach a leg panel if you need to. It prevents the band from the leg panel from blocking other pouches on the belt itself. Ridges are sewn on the inside of the belt to improve ventilation and comfort. They also make the belt fit snugly on the body. In the top of the belt, loops are sewn so you can attach a harness or similar.

A ballistic panel can be inserted into the belt.

Remove the waist band and use the riggers belt to combine the features of both belts. A three point security buckle prevents unwanted opening.

The belt adjuster can be used on this belt.

Dimensions and sizes: S= 76-105 cm, M= 85-115 cm, L= 95-125 cm, XL= 105-135 cm. **Weight:** 500 g

Article no. 13-00116

Comfort belt –13

A padded belt with two to three MOLLE webbings sewn on the outside for a comfortable carry of any type of pouch or holster.

The MOLLE webbings are sewn on eight cm wide panels with slots between the panels. The inner belt can be placed on the outside of one or more panels so a pistol holster can be worn. An inside 25 mm band is sewn under the panels, use it to attach a leg panel if you need to. It prevents the band from the leg panel from blocking other pouches on the belt itself. A ballistic panel can be inserted inside the belt.

Remove the waist band and use the riggers belt to combine the features of both belts.

A three point security buckle prevents unwanted opening. The adjuster makes it easy to adjust the size of the equipment belt when you change from heavy winter clothing to lighter clothing. The security band is used as usual on top of the adjuster. This adjuster is very neat when you are changing your clothing during the day. In the morning, it is cold and you wear more clothing. When it gets warmer and you remove some clothes, you need to tighten the belt, and then you use the Belt adjuster.

Dimensions and sizes: S= 76-105 cm
M= 85-115 cm, L= 95 -125 cm
XL= 105-135 cm. **Weight:** 480 g

Article no. 13-00327

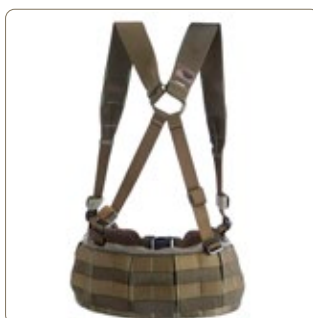

Combat belt harness –14

A harness to support the combat belt. Distribute some weight from your hips to the upper body. One size fits all, adjustable in length and width. Attaches to the top of the belt.

Weight: 50 g

Article no. 15-01029

PANELS, VESTS & RIGS

50 mm buckle adapter set

50 mm side release buckles for leg panels.

We use Velcro in our construction. For users who prefer side release buckles on the leg straps, we have developed this adapter set. Put the male side release buckles on the elastic leg straps. The Velcro closes around the square ring on the leg panel with the female side release buckle.

Dimensions: L=11 & W=5 cm. **Weight:** 20 g.

Article no. 26-00102 or 40-00102

Light leg attachment -10

The leg attachment is used to carry any pouch on the leg.

The pouch straps are inserted in the attachment bands on the back of the pouch. The elastic leg strap is also inserted into the attachment bands on the back of the pouch.

The leg attachment can be adjusted in height with the side release buckles. These buckles make it easy to take off or put the pouch on the leg.

The straps has Velcro and can be attached and detached from the belt while worn.

One size fits all.

Note: Only the webbing and attachment is included in this product, no pockets or bags.

Dimensions: L=54 & W=5 cm.
Weight: 90 g.

Article no. 14-00505 or ALL-10

Leg attachment -08

This holder gives you one position for pouches or a holster. Use it for any pouch or holster in our range. Wrap it around your trouser belt in the top. Wrap the elastic band around your thigh. One size fits all.

Dimensions: L=38 & W=9 cm. **Weight:** 170 g.

Article no. 14-00514 or PHLH-08

Belt attachment -11

Extra belt attachment for leg panels.

Dimensions: L=12 & W=4 cm. **Weight:** 20 g.:

Article no. 26-00598 or BAT-11-

Modular rip-off panel -09

Put your pouches on this panel and you have a package that is quick to remove from your vest. A quick removable panel that is easy and fast to remove and attach to the vest, leg panel or other carrier. The panel is made in two parts that are connected with Velcro and two press buttons. The inner panel is attached to the carrier and on the outer panel, the pouches you want to have removable, are attached. There is a security strap on the inner panel that can be attached horizontally or vertically around the pouches. The security strap can also be removed.

Dimensions: L=23 & W=18 cm. Weight: 10 g.

Article no. ROP-09

Large leg panel -12

A firm and ventilated place on your leg for one to four pouches.
Mesh, perforated plastic sheet and foam keeps the leg panel comfortable and ventilated.
Elastic bands with Velcro closure secures the leg panel to your leg.
Quick release buckle with pivot function attaches the leg panel to your belt.
One size fits all.

Dimensions: L=24 & W=22 cm. Weight: 230 g.

Article no. 14-00097 or 16-00097 or PLM-10

Small leg panel -12

A firm and ventilated place on your leg for one to three pouches.
Mesh, perforated plastic sheet and foam keeps the leg panel comfortable and ventilated.
Elastic bands with Velcro closure secures the leg panel to your leg. Quick release buckle with pivot function attaches the leg panel to your belt.
One size fits all.

Dimensions: L=17 & W=17 cm. Weight: 200 g.

BALLISTIC PROTECTION

THE SQUEEZE SYSTEM

System components:

- Ballistic yoke with collar
- Small ballistic sleeve set
- Ballistic side panels
- Squeeze plate carrier
- Ballistic belt
- Ballistic groin protection set

A combination of different parts!

The Squeeze ballistic protection and equipment carrying system allows you to adapt the protection and the carrying capacity to meet the needs while taking weight, heat stress and other challenges into account.

The parts can be combined in many different ways depending on the threat, the mission and the environment.

Squeeze plate carrier -15 **RESTRICTED**

This plate carrier sits very comfortable and tight on your body.

It is easy to adjust in height and width, even when worn.

The plate carrier is used either with the side panel pouch set or the quick adjust set.

Both options are attached with a zipper in the side of the plate carrier to be easy to open or close. Foam ridges on the inside for increased ventilation, comfort and lower trauma. Compartments for ballistic panels and ceramic plates on the front and back. The bottom of the plate carrier is where the ballistic panels and plates are inserted or removed. This is also where you attach the groin protection when needed.

MOLLE webbing on the front and back. One attachment point on each shoulder for a repair buckle to attach a backpack. Two attachment points under the MOLLE webbings on the chest for repair buckles to attach the chest panel. An elastic cord is placed around the edge of the front to hold hydration tubes or cables.

Removable padded yoke wraps with cable channel and elastic loops for antennas.

Your radio ear piece can be placed under a flap in the shoulder wrap when not in use.

Velcro patches on the front and back for name and unit patches.

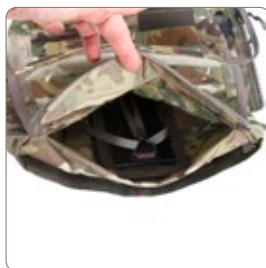

The Squeeze plate carrier can be carried in a system with the ballistic yoke, small ballistic sleeve set and ballistic groin protection set to make a really good protective set.

Size 1: 17-00944-xx-001, **Weight: 850 g**

Size 2: 17-00944-xx-002, **Weight: 900 g**

Size 13 17-00944-xx-003, **Weight: 1000 g**

Squeeze side panel pouch set -15

The option to select if you want ballistic protection in the side of your Squeeze plate carrier. In this set a ballistic panel (81-00933) can be carried in each pouch.

On the outside of the pouches, MOLLE webbings are sewn so you can attach equipment pouches. The side panel set is attached in the back of the Squeeze plate carrier. It is very fast and easy to adjust, just pull the knob in the lower front and the panel pouch is pulled back, making it sit tight around your body.

Size 5. 84-00984-xx-005, **L=23 & W=18 cm. Weight: 300 g**

Size 7. 84-00984-xx-007, **L=23 & W=18 cm. Weight: 320 g.**

Size 9. 84-00984-xx-009, **L=23 & W=18 cm. Weight: 340 g**

Size 1. 84-00984-xx-011, **L=23 & W=18 cm. Weight: 360 g**

Squeeze quick adjust -15

The ventilated option for your Squeeze plate carrier.

It leaves your sides open, but allows you to attach pouches on the webbings in the sides.

The pouches can then be pushed forward when needed and back again, One size fits all.

Dimensions: L=24 & W=22 cm. Weight: 50 g.

Article no. 26-01102

Squeeze chest panel -15

The chest panel can be attached on the front of the Squeeze plate carrier with two repair buckles and the side closures. It can also be carried as a chest rig if used with our harness and long T-bar set.

Its purpose is to allow you to have different configurations of pouches.

Then it is very easy and fast to switch, depending on your mission.

It also means that you can remove the plate carrier and go light, with just the chest panel as a chest rig.

Dimensions: L=17 & W=17 cm. Weight: 100 g.

Article no. 19-01208

For current stock status, please visit snigeldesign.nordicshops.com

Features in the Squeeze system

Removable padded yokes with cable channels and elastic loops for antennas. Velcro closed flaps protect your earpiece when it is not used.

MOLLE webbing on the front and back.

Velcro patches allow you to attach unit and individual patches.

Pockets for 25x30 cm ceramic plates and ballistic panels in the front and back.

A quick attachment point for a repair buckle is placed in each side. This is where the backpack can be attached.

An elastic cord runs along the edge. Under this cord, you can secure cables and the hydration tube.

Two quick attachment points for a repair buckle are placed under the top MOLLE webbings on the front. This is where the chest panel can be attached.

Movable zippered attachment for the side closure,

Quick adjust side closure for the best ventilation.

There are two different ways to close and tighten the carrier: Quick closure or side panel pouches. Both are very fast to adjust tightly with one hand.

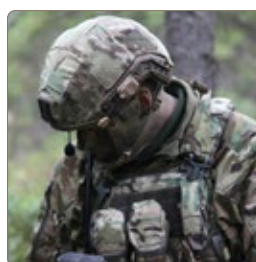

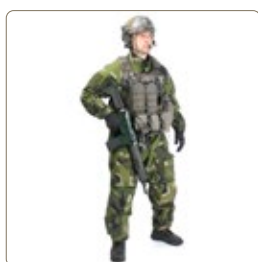

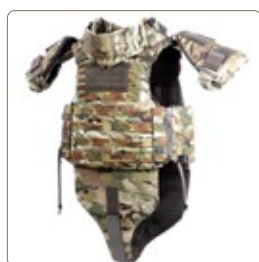

Clean inside to be as comfortable as possible and not to catch in your uniform when you put it on or take it off. Soft ridges are sewn on the inside to increase comfort and ventilation.

Attachment point for a rifle holder.

The length is adjusted in the shoulder strap. The width is adjusted in the side closure system.

Size 2 is suitable for most users. Size three should be selected if you are tall.

Side panel pouches for the highest protection.

THE STRAP-ON SYSTEM

Parts in the system

- Ballistic yoke with collar
- Plate carrier Strap-on
- Small ballistic sleeve set
- Ballistic belt
- Ballistic groin protection set

A combination of different parts!

The Strap-on ballistic protection and equipment carrying system allows you to adapt the protection and the carrying capacity to meet the needs while taking weight, heat stress and other challenges into account.

The parts can be combined in many different ways depending on the threat, the mission and the environment.

Plate carrier, Strap-on DF -13 **RESTRICTED**

This plate carrier sits very comfortable and tight on your body.
Adjust it to your size in the shoulders, put it on and pull the cords to make it sit tight.
Tighten the webbing in the back.
Foam ridges on the inside for increased ventilation, comfort and lower trauma.
Compartments for ballistic panels and ceramic plates on the front and sides.
MOLLE webbing on the yoke, front and sides.
Three adjustable pouches with elastic loop holder for different 5,56 or 7,62 mm magazines or radios. Even your pistol with a lamp can be carried in them.
Adjustable elastic cords on the outside to keep the magazines tight.
Top front pocket for maps and other administration gear.
Small compartments for cleaning kits, light sticks etc. on the inside of the Strap-on.
Padded yokes with cable channels and elastic loops for antennas. Your radio ear piece can be placed under a flap in the yoke when not in use.
Openings for radio wires in the front.
Elastic loops on the shoulders for hydration tube or radio wires.
Velcro patches on the front for name and unit patches.
The bottom of the plate carrier can be opened so the plates can be pulled out in an emergency.

The Strap-on can be carried in a system with the ballistic yoke, small ballistic sleeve set and ballistic groin protection set to make a really good protective set.
The carrier pouch in the back is not included.

Weight: 1360 g

Article no. 17-00642

Carrier pouch DF -12

A small backpack or pouch for your ballistic plate.
Can hold one ballistic plate or one 2,5 liter hydration system.
Foam ridges on the inside for increased ventilation, comfort and lower trauma.
Can be attached on the back of the "Strap-on" plate carrier.
MOLLE webbings on the outside so you can attach other pouches on it.
Velcro patches on the front for name and unit patches.
The bottom of the plate carrier can be opened so the plates can be pulled out in an emergency.
Can be used as a plate carrier with two carrier pouches. Just connect them with the shoulder straps -11 and the T-bars -10 in the side. Or even as a shoulder bag with the carry strap -11
You can also use this carrier as a backpack on your modular vest or on the outside of a backpack to increase the storage capacity.
The elastic T-bar set is not included in the product.

Dimensions: L=33, W=25 & D=4 cm. Weight: 330 g

Article no. 23-00390

Features on plate carrier, Strap-on DF -13

- Padded yokes with cable channels and elastic loops for antennas.
Foam on the bottom and hard plastic in the top to be as comfortable as possible.
- MOLLE webbing on the front, shoulders and sides.
- Velcro allows you to attach unit and individual patches.
- Zippered admin pouch with internal clear window and compartments in elastic mesh, on the top front.
- Pockets for ceramic plates or ballistic panels in the front and sides.
- The sides are made from mesh to be as smooth and cool as possible. They are covered in MOLLE webbing.
- Three adjustable pouches with removable elastic loop holder for different 5,56 or 7,62 mm magazines or radios.
- Pull the tightener cord to make the Strap-on sit really tight on your body
- The most important part of this system is the way it is tightened on your body when you put it on.
You adjust the band in the back once, to make it fit good.
Then you tighten the cord in the lower front. This is the best placement as you pull down, which is the easiest.
To take it off, open up the cord lock and push the front of the system up, then take it off.

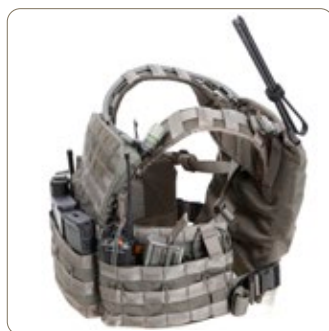

- Loop to attach the ballistic sleeve in.
- Webbing to attach the carrier pouch is placed on the back of the yoke.
The yoke is padded with foam and plastic to be firm but soft = maximum comfort.
- Compartment for a compass or weapon cleaning kit.
- Clean inside to be as comfortable as possible and not to catch in your uniform when you put it on or take it off.
- Adjustable bands on the back.
The bands can be put on in an X or H configuration.
H pulls the yoke to the side, making it less prone to snag, the X is tighter. You adjust it according to your preference.
- Compartments for a few light-sticks.
- Channel for cable ties and a row of MOLLE attachment points.
- Soft ridges are sewn on the inside to increase comfort and ventilation.
- Drop function, so you can release the plates.
The bottom of the pockets can quickly be opened to dump the plates if needed.
- The end of the straps can be rolled up.

Plate carrier Strap-on -14

This plate carrier sits very comfortable and tight on your body. Adjust it to your size in the shoulders, put it on and pull the cords to make it sit tight. Tighten the webbing in the back. Compartments for ballistic panels and ceramic plates on the front and sides. Six MOLLE webbing slots on the front and four on the sides. Also MOLLE webbing on the yoke. Three pouches with elastic loop holder for different 5,56 or 7,62 mm magazines or radios. Even your pistol with a lamp can be carried in them. Velcro patches on the front for name and unit patches. The bottom of the plate carrier can be opened so the plates can be pulled out. The Strap-on can be carried in a system with the ballistic yoke, small ballistic sleeve set and ballistic groin protection set to make a really good protective set. *Neither the carrier pouch nor the 40mm elastic T-bar is included in Strap-on -14.*

Weight: 1250 g

Article no. 17-01020

Carrier pouch -15

A small backpack or pouch for your ballistic plate. Can hold one ballistic plate or one 2,5 liter hydration system. Foam ridges on the inside for increased ventilation, comfort and lower trauma. Can be attached on the back of the "Strap-on" plate carrier or any vest. MOLLE webbings on the outside so you can attach other pouches on it. Velcro patches on the front for name and unit patches. The bottom of the plate carrier can be opened so the plates can be pulled out in an emergency. Can be used as a plate carrier with two carrier pouches. Just connect them with the shoulder straps -11 and the T-bars -10 in the side. You can also use this carrier as a backpack on your modular vest or on the outside of a backpack to increase the storage capacity. Or even as a shoulder bag with the carry strap -11. *The elastic T-bar set is not included in the product.*

BACKPACKS

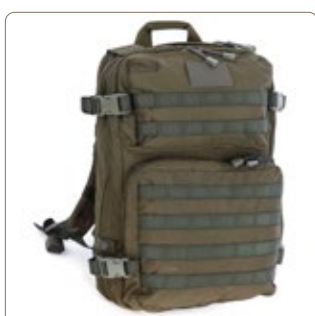

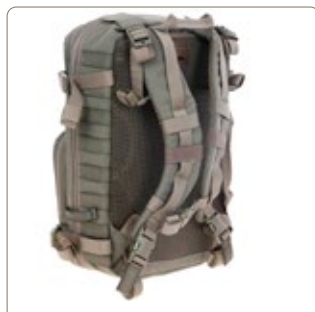

Backpack transition from approach march to combat

This is our system of how to move from approach march to combat in one smooth and fast way. The mission backpack is attached on the back of the 90 or 120L backpack and easy to attach and to remove.

For current stock status, please visit snigeldesign.nordicshops.com

25L Specialist backpack

A solid, reliable and versatile backpack for storage and transport of sensitive/delicate equipment.

The backpack can be tailored by the user for radio or medical gear.

It has a ventilated back with a plastic sheet and an aluminum stay to make it firm, but adaptable.

Shoulder pads are made from plastic foam for comfort and even balance of weight. They have a chest strap and attachment for handset/microphone.

The shoulder pads can be stored behind the back plate and you can then use the backpack as a shoulder bag and one side compression strap can then be used as a shoulder strap.

A ballistic plate or hydration bladder can be carried in the compartment in the back.

The bag is made from hard wearing coated polyamide fabric with heavy duty zippers.

Long heavy duty zipper with long pull cords to allow the backpack to fully open up.

Press-button in the main compartment stops the zipper from opening too much.

Four long side compression straps are sewn to the backpack.

The loose ends of the side compression straps roll up and are secured with Velcro.

The bag has two carrying handles, one on the side and one in the top.

Main compartment has two inside pockets with zippers that are good for first-aid equipment, field work equipment or other technical equipment.

The outer pockets are zippered and they each have an internal zippered elastic mesh pocket.

MOLLE webbing to mount pouches are placed on the outside of the outer pockets.

An optional medical divider can be mounted with straps in the middle of the inside of the backpack. The divider remains vertical when the backpack is opened.

A man-pack radio can be secured with two straps close to your back for best weight distribution and balance (straps not included).

Two holes for cables or a tube for the hydration system are placed in the top of the backpack. Access holes for radio or computer cables are placed in each side on the bottom of the backpack.

The cable for the radio microphone is put through the access hole in the lower part of the backpack and then the microphone is attaches to the shoulder pad.

Owner identification can be written on the Velcro strip.

The backpack fits cabin luggage measurements.

The backpack can be attached on the back/top of our vests and plate carriers.

Size: 25 liter. Dimensions: W=30, H=45 & D=16 cm. Weight: 1400 g

Article no. 29-00027 or 23-00027

Ghillie cloak -14

A light-weight camouflage net that works well with your carrying system and that reduces your visual and to some extent your thermal signature. Can be used as a jacket or as a camouflage netting. When you move you carry it as a jacket and when you go static you can use it as a camouflage netting. The garnish (leaf like patches) are sewn so they don't get stuck in the vegetation when you move with the cloak on. On the edge of the cloak, loops are sewn flat to minimize risk that they catch in branches. The back of the cloak is printed in a desert/mountain colors. The volume is only two liters when packed. The cloak is made of a flame-retardant polyester mesh that doesn't retain water so it won't get heavier in the rain.

Dimensions: 120x150 cm. Weight: 500 g

Article no. 41-0012

Dual side 2D camouflage net -12

A personal two side printed camouflage net for woodland and desert environments.

Green/light green print on one side.

Grey/brown print on the other side.

COVERT GEAR

Covert dual pouch –15 **RESTRICTED**

A covert pouch for all kinds of equipment that you want to carry on your trouser belt.

Two outside compartments for pistol magazines, OC spray or a baton. A full width inner compartment for a radio, 5.56 mm magazine or similar. The pouch is made in elastic webbing so it is as flat as possible and keeps the content rattle free and secure.

An elastic cord with Velcro closure secures the top of the pouch.

The bottom has an adjustable Velcro closure to make the pouch fit different objects.

Can be attached vertically or horizontally.

Dimensions: H=10 & W=15 cm. **Weight:** 50 g

Article no. 21-00807-01-000. Black only

Telescopic baton arm holder –08 **RESTRICTED**

If you want to be discreet when carrying the collapsible baton, this is the holder to use.

Carried on the wrist, secured by your watch.

Fits most arms.

Fits most batons. Easy to extract and to reinsert the baton after use.

Elastic with good ventilation.

Attach the strap under your wrist watch to secure the holder.

Pull out the baton slightly for easier access, and push it up to completely hide it.

Your wrist watch will stop the holder from sliding toward the hand.

The size is adjusted with the Velcro strip.

Dimensions: H= 23 & W=12. **Weight:** 50 g

Article no. 24-00632-01-000. Black only

Single side covert equipment harness –11 **RESTRICTED**

A light-weight and tight harness for minimal covert equipment carrying.

For one radio, one CS spray can and a telescopic baton. A pair of handcuffs can be carried under the arm on the other side of the panel.

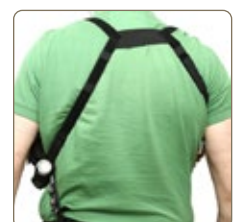

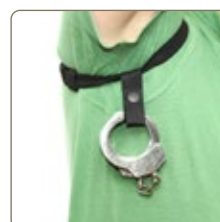

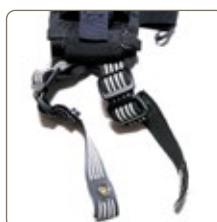

The harness is small and thin and is carried so it cannot be seen while using an open jacket or shirt. The harness is comfortable despite its narrow shoulder straps. The back strap and the belt straps relieve pressure from your neck. You can place all your equipment in the harness instead of in your trouser and jacket pockets. All your equipment will be stored in one place and will be easily accessible. The harness is easy to put on and take off.

Back strap stops the harness from sliding forward.

On the shoulder strap a microphone can be attached.

Dimensions: H= 26 & W=9. **Weight:** 300 g

Article no. 15-00602-01-000. Black only

The width can be adjusted 20 cm in the back in each size.

Sizes: Size one for smaller users, Size 2 for most users, size 3 for the big guys.

Weight: 500 g

Article no. 18-00484-01. Black only

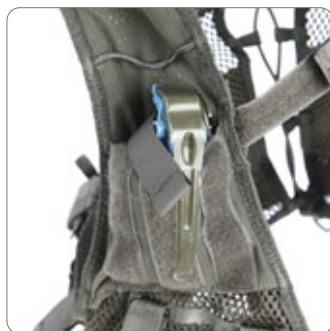

Covert equipment vest -12 **RESTRICTED**

Carry all the equipment you need concealed under your jacket.
When you have a break remove the vest with all your equipment intact and relax. Put it on again and know that you have everything you need.
The vest is also very popular for overt tactical use because it sits so tight on your body.
Can be worn closed in the front or open for concealment when carried under an open jacket. Adjustable in size with an elastic cord for comfort.
Channels for radio wires on the back and front.
Compartment for an ear piece on the top front.
Three closures on the front to sit tight and still when fully loaded. Can be pushed into the vest to be hidden. Inside compartment with zipper. Removable holder for two stun grenades on each shoulder. Three outside elastic compartments and 6 inside elastic compartments with top opening for SMG or 5.56 magazines, baton, radio, flashlights etc.
Three back outside elastic compartments and 6 inside elastic compartments with top and bottom opening for SMG or 5.56 magazines, baton, flashlights etc.
Inside compartment for a pistol on the left and right side.
Trousers belt loop attachment in the bottom of the vest.
Velcro sign holder on the front and back. The width can be adjusted 20 cm in the back.

Sizes: Size 1 for smaller users, size 2 for most users, size 3 for the big guys.

Weight: 700 g

Article no. 18-00095-09. Grey only.

Transformer covert backpack -12 **RESTRICTED**

The covert backpack is called the "Transformer" for a reason. In less than 30 seconds (less than 10 if you have practiced) the backpack is transformed into a tactical ballistic vest with your weapon on your chest.

The bag has three main functions: Reconnaissance, assault or personal protection.

For the undercover officer the bag will store your radio induction loop and headset. It can also store your handgun and baton where it is easy to reach. There is also space for a ballistic vest and backup weapon to be carried discreetly when only a thin shirt or T-shirt can be worn.

For the user the bag offers the possibility to transfer a civilian-looking person to an assault ready operator in around ten seconds.

In the bag you put the ballistic vest and ceramic plates, magazine, distraction grenades, radio with headset, police badge, etc. G36 or MP5 attaches to the inside of the bag and can easily be removed when the vest has been deployed.

The personal protection officer can be covert and still carry protective equipment and backup weapons that increase the chances to handle a critical situation in a flexible and quick way.

Holds your personal body armor and two ceramic plates.

Inside Velcro covered MOLLE webbings for pouches for communication gear, magazines, tear gas spray, flashlight etc. for surveillance and tactical operations.

A special Velcro attached pistol holster is included with the backpack.

Cable ports and channels for hidden microphone and the earpiece.

Hidden compartment on the back with zippered opening for pistol and baton.

Max length of a folded weapon to be carried in the backpack is 50 cm.

Dimensions: H=52, W=35 & D=14 cm. Weight: 2200 g.
